

Adaptive Capability Maturity Model

How Do You Measure Up?

Discover how your organisation measures up using our unique Adaptive Capability Maturity Model. Benchmark your organisation's approaches to dealing with climate change and other strategic and environmental risks across seven key process areas and hundreds of criteria.

Applying Enterprise Risk Management (ERM) practice with climate and environmental science, our model provides a simple capability maturity scoring system, allowing you to gauge your organisation's progress against that of industry peers in our database.

The Adaptive Capability Maturity Model diagnostic report will help focus your organisation's efforts towards boosting your adaptive capacity with a series of detailed recommendations across the following critical questions:

- Does your organisation have appropriate governance structures, policies and accountabilities in place to manage climate and environmental risks and opportunities effectively?
- Does your organisation measure and understand the full impacts of its operations on the environment?
- Has your organisation considered the full range of climate and environmental risks?

- Are your organisation's business lines, activities and supply lines sustainable, minimising emissions and other environmental degradation?
- Has your organisation taken appropriate measures to mitigate and reduce its climate and ecological footprint?
- Have you made your organisation operationally resilient against the impacts of climate change and other environmental hazards?
- Is your organisation taking a leadership position in helping key stakeholders such as suppliers, staff and customers mitigate and adapt?
- What emerging opportunities related to climate and environmental change could secure new revenue streams for your business?

About Us

Business solutions for a changing planet.

Adaptive Capability provides strategic, business focused services helping organisations build their adaptive capacity and competitive advantage in the face of climate change and other environmental risks.

We work with businesses, local government and other organisations wanting to deepen their understanding of how climate change and other growing environmental issues affect and are affected by their activities.
